

# Chemical-Free Sanitizing Spray System Quick Start Guide

**Step 1** – Before using the sprayer for the first time, charge the unit. The first charge may take up to 2 hours. Connect the battery charger to a wall outlet. Then connect the battery charger power cord to the spray bottle and charge until charger light turns green. The red light on the charger indicates that the device is being charged. The charge is complete when the light on the charger is green. NOTE: The spray bottle will not operate while connected to the battery charger.

**Note:** After charging, it is important to securely push protective flap back in place.

**Step 2** - Remove the blue fill cap to fill the reservoir with 14 oz of clean, cold potable water. While holding the unit in the horizontal position, fill the reservoir about half full. Securely replace the fill plug. Turn bottle in vertical position and check fill line. Repeat until water reaches fill line. Do not overfill. Do not fill with hot water.

**Step 3** – Hold 6-8” away from surface and spray. While spraying, blue light indicates unit is working properly.
